

Digital Innovations via the Singapore Market

Alexey Romanchuk, CTO
Copernicus Gold / GoldPlus Assets
June 11 2019

What are we?

- **Copernicus Gold** is a technological platform developed by a team which has considerable experience in banking
- We have launched several banking projects in Russia in the last 20 years
- The platform was first announced at APPMC 2017
- Early adopters of the blockchain technology and digital gold

Is blockchain good for gold?

- At first sight: many advantages and “magical” technical features (integrity checking, cryptography, signatures, immutability, failover)
- More fair to customers: no changes without authorization
- More transparent to regulators: no way to hide anything on the balance sheet

Why is blockchain still no big deal?

- Diving deeper: an overestimated technology, people use it as a silver bullet for all possible and impossible problems
- Most projects are similar: substantiated (by something) tokens on blockchains or tracking something on blockchains
- It does not solve any customers' problems by itself: it is rather a solution which allows to find a problem
- Our vision: blockchain is just a technical thing, a tricky database. But we should start from our customers' problems first

Introducing Copernicus Gold

- CG platform uses blockchain as a secure storage of transactions and remainders
 - Many layers and applications which fulfill the customers needs
 - A high level of internal automation and low-cost processes
 - A B2B platform for quickly launching retail products connected with electronic currencies and tokens
- a high-level API
 - math models for management of substantiation of electronic currencies
 - gateways to banks, payment systems, forex exchanges, trade systems
 - mobile and web apps ready for the market. KYC/AML subsystem.

Why Singapore?

- A pro-business environment with a clear and transparent regulation strategy (of how these regulations will evolve)
- A central location in SEA and an extremely huge number of players and opportunities
- Our strategy: finding strong partners in different businesses - precious metals, renewable energy, digital banking, cross-border transfers, lending (B2B)

Announcement of JV: GoldPlus Assets

- We have a joint venture project created together with GoldSilver Central for applying tokenization to gold bullions and coins
- An example of a successful collaboration in Singapore between a tech company and a company that has been operating in the precious metals market for years

GoldPlus Assets

- Quick estimation how much of assets I own
- Live valuation available 24/7 on your phone
- Converting gold to jewellery or selling it for fiat currencies
- Trade your gold
- Additional services from this gold, e.g. a collateral loan

- Visit us: www.goldplusassets.com

Thank you!
